2. Job Applicant Profile system

Design a Candidate Profile Management System using multiple Inheritance. Create a class named PersonalInfo containing: Candidate Name, Date of Birth, Contact Number, Email. Create a method to display personal information. Create a class named Education derived from PersonalInfo containing: Degree, University, year of Graduation, CGPA, Create a method to display educational details: Create another class named Experience derived from Education containing: Company Name, Job Role, years of Experience, skills. Create a method to display work experience details. Create a class named Candidate Profile derived from Experience that:

Displays the complete profile of the candidate. Add a method that checks whether the candidate is : Eligible for senior Role (Experience >5 years), Eligible for junior Role (Experience ≤ 5 years). Assume a company wants to store the details of two candidates and generate a complete professional profile using Inheritance.

Program:

```
Class personalInfo:
    def __init__ (self, name, dob, contact, email):
        self.name = name
        self.dob = dob
        self.contact = contact
        self.email = email
    def display_personal (self):
        print ("Name: ", self.name)
        print ("Date of Birth", self.dob)
        print ("Email: ", self.email)
class Education (personalInfo):
    def __init__ (self, name, dob, contact, email, degree,
                  university, year, cgpa):
        personalInfo.__init__ (self, name, dob, contact,
                               email)
        self.degree = degree
        self.University = University
        self.year = year
        self.cgpa = cgpa.
    def display_education (self):
        print ("Degree: ", self.degree)
        print ("University: ", self.University)
        print ("year of Graduation: ", self.year)
        print ("CGPA : ", self.gpa)
```

```
class Experience (Education):
    def __init__ (self, name, dob, contact, email, degree,
                  university, year, cgpa, company,
                  role, years_exp, skills):
        Education.__init__ (self, name, dob, contact,
                            email, degree, university,
                            year, cgpa)

        self.company = company
        self.role    = role
        self.years_exp = years_exp
        self.skills  = skills
    def display_Experience (self):
        print ("Company Name: ", self.company)
        print ("Job Role : ", self.role)
        print ("Years of Experience :", self.years_exp)
        print ("Skills : ", self.skills)

class Candidate profile (self):
    def display_profile (self):
        print ("\n --- Candidate profile --- ").
        self.display_personal()
        print ("\n --- Education Details ---")
        self.display_education()
        print ("\n --- Work Experience ---")
        self.displace_experience()
    def check_eligibility (self):
        if self.years_exp > 5 :
            print ("Eligible for senior role")
        else :
            print (" Eligible for Junior Role")
```

c1 = Candidate profile ("Reshma", "08-03-2007", "8074951526",
"reshma28@gmail.com", "B.Tech",
"ANITS", 2028, 9.0, "Infosys",
"Software Engineer", 5, "Python, Java")

c2 = Candidateprofile ("Sria", "14-04-2002", "9125328532",
"sria@gmail.com", "B-Tech", "GUP", 2024,
9.2, "TCS", "Junior Developer", "Python,
SQL")

c1.display_profile()
c1.check_eligibility()
c2.display_profile()
c2.check_eligibility()

```
--- Candidate Profile ---
Name: Reshma
Date of Birth: 08-03-2001
Email: reshma28@gmail.com

--- Education Details ---
Degree: B.Tech
University: ANITS
Year of Graduation: 2028
CGPA: 9.0

--- Work Experience ---
Company Name: Infosys
Job Role: Software Engineer
Years of Experience: 5
Skills: Python, Java
Eligible for Junior Role

--- Candidate Profile ---
Name: Sita
Date of Birth: 10-04-2002
